Contents

<i>Preface</i>	vii
1. INTRODUCTION	1
1.1 What are micromechanics and nanomechanics?	1
1.2 Vectors and tensors	4
1.2.1 Vector algebra	4
1.2.2 Tensor algebra	6
1.2.3 Inversion formula for fourth-order isotropic tensor	9
1.2.4 Tensor analysis	11
1.3 Review of linear elasticity theory	13
1.3.1 Governing equations	13
1.3.2 Betti's reciprocal theorem and the Somigliana identity	15
1.4 Review of finite elasticity	18
1.5 Review of molecular dynamics	20
1.5.1 Lagrangian equations of motion	20
1.5.2 Hamiltonian equations of motion	22
1.5.3 Interatomic potentials	24
1.5.4 Two-body (pair) potentials	24
1.5.5 Embedded-Atom-Method (EAM)	27
1.6 Elements of lattice dynamics	29
1.6.1 Crystal lattice structures	29
1.6.2 Crystallographic system	32
1.6.3 Lattice dynamics	35
1.7 Exercises	37
2. GREEN'S FUNCTION AND FOURIER TRANSFORM	39
2.1 Basics of Green's function	39
2.2 Fourier transform	42
2.3 Examples of Green's functions	47
2.4 Static Green's function for 3D linear elasticity	50

2.5	Green's function for Stokes equations	56	5.	COMPARISON VARIATIONAL PRINCIPLES	159
2.6	Radon transform	58	5.1	Review of variational calculus	159
2.7	Green's function for elastodynamics	62	5.2	Extremum variational principles in linear elasticity	163
2.8	Lattice statics Green's function (LSGF)	65	5.2.1	Minimum potential energy principle	163
2.8.1	Maradudin's solution for the screw dislocation	66	5.2.2	Minimum complementary potential energy principle	166
2.9	Exercises	70	5.2.3	Voigt bound and Ruess bound	168
3.	MICROMECHANICAL HOMOGENIZATION THEORY	73	5.3	Hashin-Shtrikman variational principles	170
3.1	Ergodicity principle and representative volume element(RVE)	74	5.4	Hashin-Shtrikman bounds	176
3.1.1	Ergodic principle	75	5.5	Review of functional analysis and convex analysis	186
3.1.2	Representative volume element	78	5.5.1	Concept of convexity	191
3.2	Average field in an RVE	80	5.5.2	Gâteaux variation and convex functional	193
3.3	Definition of eigenstrain, eigenstress, and inclusion	86	5.5.3	Primal variational problems	195
3.4	Eshelby's equivalent eigenstrain method	86	5.6	Legendre transformation and duality	196
3.5	Fundamental equations of micro-elasticity	89	5.7	Legendre-Fenchel transformation in linear elasticity	203
3.5.1	Method of Fourier transform	90	5.8	Talbot-Willis variational principles	204
3.5.2	Method of Green's function	91	5.9	Ponte Castañeda variational principle	207
3.6	Eshelby's solution to the inclusion problem in an infinite space	94	5.9.1	Effective property and nonlinear potential	207
3.6.1	Interior solution of ellipsoidal inclusion	95	5.9.2	Variational method based on a linear comparison solid	210
3.6.2	Eshelby's conjectures	99	5.10	Zvi Hashin	212
3.6.3	Exterior solution of ellipsoidal inclusion	102	5.11	Exercises	212
3.6.4	The second derivatives of Green's function and the Eshelby tensors	106	6.	ESHELBY TENSORS IN A FINITE VOLUME AND THEIR APPLICATIONS	217
3.7	Applications of eigenstrain theory	108	6.1	Introduction	217
3.7.1	Strain field in embedded quantum dots	108	6.2	The inclusion problem of a finite RVE	218
3.7.2	Dislocation problems	112	6.3	Properties of the radially isotropic tensor	221
3.7.3	Stress intensity factor for a flat ellipsoidal crack	115	6.4	Eshelby tensors for finite domains	224
3.8	John Douglas Eshelby (1916-1981)	121	6.4.1	Dirichlet-Eshelby tensor	225
3.9	Exercises	125	6.4.2	Neumann-Eshelby tensor	229
4.	EFFECTIVE ELASTIC MODULUS	131	6.5	Average Eshelby tensors and average disturbance fields	233
4.1	Effective modulus for composites with dilute suspension phases	131	6.5.1	Average Eshelby tensors	234
4.1.1	Basic equations for average stress and strain	131	6.5.2	Average disturbance fields	236
4.1.2	Homogenization: equivalent stress/strain conditions	133	6.6	Improvements of classical homogenization methods	237
4.1.3	Example: elastic modulus of isotropic composites	136	6.6.1	Dilute suspension model	237
4.2	Self-consistent method	138	6.6.2	A refined Mori-Tanaka model	238
4.3	Mori-Tanaka method	143	6.6.3	Multiphase variational bounds	241
4.3.1	Tanaka-Mori lemma	143	6.7	Application to multiscale finite element methods	251
4.3.2	Mori-Tanaka's mean field theory	146	6.7.1	Variational multiscale eigenstrain formulation	251
4.4	Rodney Hill	151	6.7.2	Modal analysis of the modified smart element	258
4.5	Exercises	156	6.7.3	Numerical examples	260
			6.8	Exercises	264

7.	MICROMECHANICAL DAMAGE THEORY	265	9.	INTRODUCTION TO CONFIGURATIONAL MECHANICS	363
7.1	Spherical void growth in linear viscous solids	265	9.1	Configurational force: Eshelby's energy-momentum tensor	363
7.2	McClintock solution to cylindrical void growth problem	267	9.1.1	Eshelby's thought experiment	364
7.3	Gurson model	273	9.1.2	Lessons from J.D. Eshelby	371
7.4	Gurson-Tvergaard-Needleman (GTN) model	278	9.1.3	J-integral and energy release rate G	373
7.5	A cohesive micro-crack damage model	281	9.2	James R. Rice	375
7.5.1	Average theorem for a cohesive RVE	282	9.3	Configurational compatibility	376
7.5.2	Penny-shaped cohesive crack under uniform triaxial tension	283	9.3.1	Continuum dislocation theory	376
7.5.3	Effective elastic material properties of an RVE	287	9.3.2	Continuum disclination theory	379
7.5.4	Micro-cohesive-crack damage models	291	9.3.3	Re-combination I: The generalized Nye theory	380
7.6	Frank A. McClintock	293	9.3.4	Re-combination II: The Kröner-deWit theory	381
7.7	Exercises	293	9.3.5	Compatibility conservation laws	381
8.	INTRODUCTION OF DISLOCATION THEORY	297	9.4	Multiscale energy-momentum tensor	384
8.1	Screw dislocation	297	9.5	Ekkehart Kröner (1919-2000)	391
8.1.1	The solution of a screw dislocation	298	9.6	Exercises	391
8.1.2	Image stress of a screw dislocation in a half space	301	10.	SMALL SCALE COARSE-GRAINED MODELS	393
8.1.3	Eshelby's twist: screw dislocation in a finite whisker	302	10.1	Gurtin-Murdoch surface elasticity model	393
8.2	Edge dislocation	303	10.1.1	Projection operator	393
8.2.1	Image stress for an edge dislocation	306	10.1.2	Gurtin-Murdoch theory	396
8.3	Peach-Koehler force	308	10.1.3	Spherical inclusion problem	397
8.4	Point defects	313	10.2	Cohesive quasi-continuum finite element method	399
8.4.1	Displacement field induced by a point defect	314	10.2.1	Atomistic modeling	400
8.4.2	Formation volume tensor	315	10.2.2	Quasi-continuum method	401
8.5	Continuum theory of dislocation	317	10.2.3	Interface Cauchy-Born rule	404
8.5.1	Volterra and Mura's formulas	317	10.3	Microscale or mesoscale stress	412
8.5.2	The Burgers formula	320	10.3.1	Virial stress	412
8.5.3	Peach-Koehler stress formula for dislocation loop	323	10.3.2	Hardy stress	415
8.6	Discrete dislocation dynamics (DDD)	325	10.4	Exercises	418
8.6.1	Galerkin weak form formulation	325	11.	PERIODIC MICROSTRUCTURE AND ASYMPTOTIC HOMOGENIZATION	419
8.6.2	Finite element implementation	327	11.1	Unit cell and Fourier series	419
8.7	Peierls-Nabarro model	329	11.1.1	Fourier transform of displacement field and strain field	421
8.7.1	Hilbert transform	330	11.1.2	Fourier series transform of stress field	422
8.7.2	Peierls-Nabarro dislocation model	331	11.2	Eigenstrain homogenization	423
8.7.3	Misfit energy and the Peierls force	335	11.3	Introduction to asymptotic homogenization	431
8.7.4	Variable core model	341	11.3.1	One-dimensional model problem	431
8.7.5	Story of the Peierls-Nabarro model	344	11.3.2	A multiple dimension example	436
8.8	Dislocations in epitaxial thin films	346	11.4	Variational characterization	444
8.8.1	Frenkel & Kontorova and Frank & van der Merwe models	346	11.5	Multiscale finite element method	447
8.8.2	Matthews & Blackeslee's equilibrium theory	353	11.5.1	Asymptotic homogenization of linear elasticity	448
8.8.3	Mobility of screw dislocations in a thin film	355			
8.9	Exercises	360			

11.5.2	Finite element formulation	451
11.6	G-, H-, and Γ - Convergence	454
11.6.1	Strong convergence and weak convergence	454
11.6.2	G-convergence	457
11.6.3	H-convergence	462
11.6.4	Γ -convergence	462
11.7	Toshia Mura	463
11.8	Exercises	464
Appendix A	Appendix of Chapter 6	467
A.1	Integration formulas	467
A.2	Table of Eshelby tensor coefficients for three-layer shell model	470
A.3	Finite Eshelby tensors for circular inclusion	472
Appendix B	Noether's Theorems	475
B.1	Noether's theorem for a vector field	475
B.2	Noether's theorem for a tensorial field	476
